INTRODUCTION

From the beginning, fascinated about electronics and computer's science. My previous career was connected in healthcare (helping people and solving problems is great thing). In fee time I was focused on personal development and gaining new skills. Constantly passionate about Python and Django. I see myself, as holistic person, having joy in creation and development.

PERSONAL PROJECTS

My Doctor [GitHub]   [DockerHub] CRUD application with templates, API, technology used Django, Django Rest Framework

Aplication for registered user's that allows to select one role (Patient or Doctor). Patient can create visits with selected doctor, and upload images as attachments to current visit. Different role have specific permission's. Director (singleton) have permissions to see summaries.

Live Server API: [PythonAnyWhere]
App Diagram Simplified: [MiroBoard]

Data Collector Script [GitHub] CLI script, parsing data from files JSON, CSV, XML. Validated data are stored in database (using SQL Alchemy). User can login by command and get data output.

API Upload Image Application [GitHub] [Docker] Allow to upload images by user and create thumbnails, written in Django Rest Framework
